

## Basic operation procedure

### Procedure to execute the setting one by one via 232C terminal

Power ON the main unit (MCA1120 / PCA1120) in advance

#### Preparation

##### (1) Connection

Connect the USB terminal of the PC and 232C terminal of the main unit (Rear panel)

Example of the cabl USB-232C converter cable

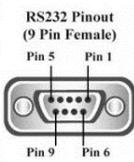

PLANEX COMMUNICATIONS INC.  
URS-03

3.5φ 232C cable

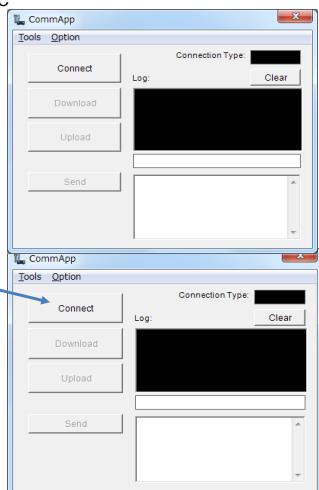

Pin 1	RI
Pin 2	TXD
Pin 3	RXD
Pin 4	DSR
Pin 5	GND
Pin 6	DTR
Pin 7	CTS
Pin 8	RTS
Pin 9	Power Input /DCD

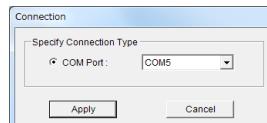

##### (2) Establish communication

Launch the PC App on your PC  
Initial screen

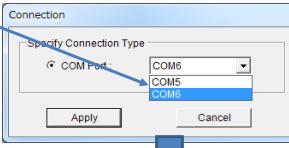

Click "Connect"

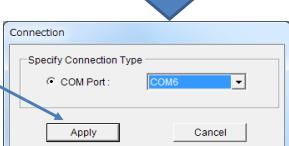

Pop-up window appears

Select the port of the connected USB cable

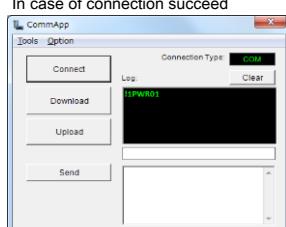

Click "Apply"

Pop-up window disappears

In case of connection succeed

In case of connection error

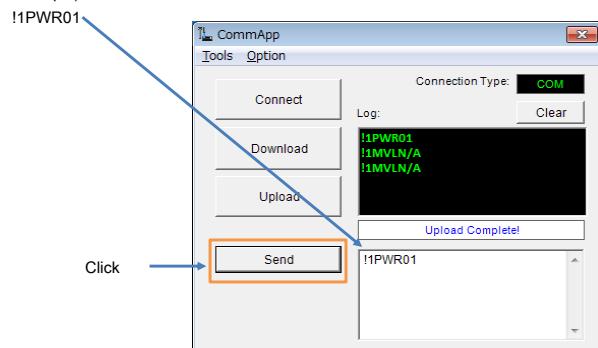

After clicking "OK",

Check cable connection or  
select another COM port etc.  
and click on "Apply" again

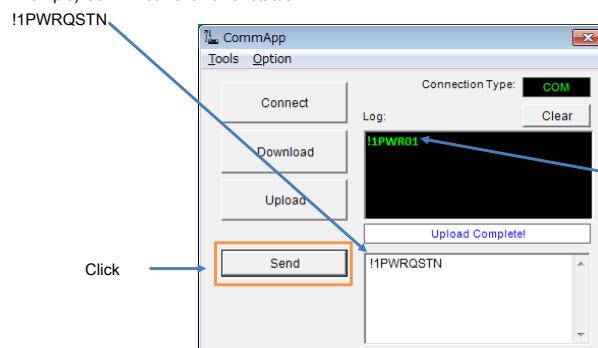

## Command setting

Enter the command code in the window  
Copy & paste the command codes from the "Command list" or punch in the command code directly  
Click "Send" after you finish entering the command code

Example) Set "Power ON"

Example) Confirm current Power status

PWR01 = Indicates Power On

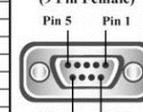

## Extract multiple parameter settings and set to another unit (Collective setting)

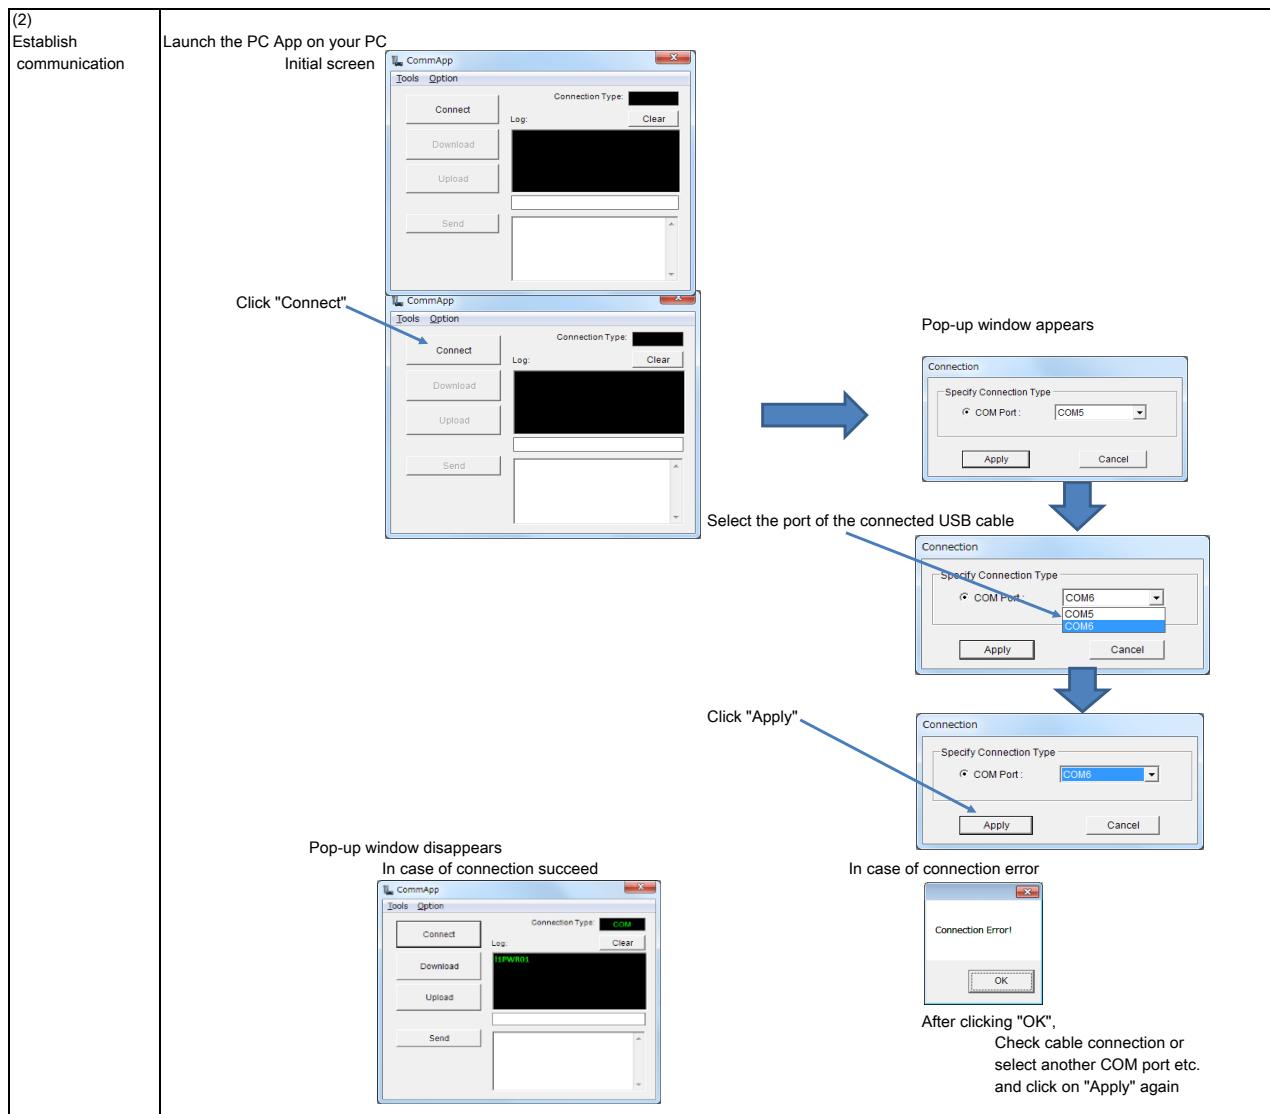

By extracting all the 232C parameter settings and saving on to a file,  
 \* Settings copy to multiple units  
 \* Settings transfer in the event of fault replacement  
 can be done collectively.

When feedback suppressor EQ of the MIC is set by 232C terminal of MCA1120, depending on the firmware version of the unit, setting parameter data might not be reflected even when you execute this collective setting. For details, please refer to the "Caution point when transferring setting parameter data from old firmware version to new" described on the bottom part of this sheet.

Power ON the main unit (MCA1120 / PCA1120) in advance

### Preparation

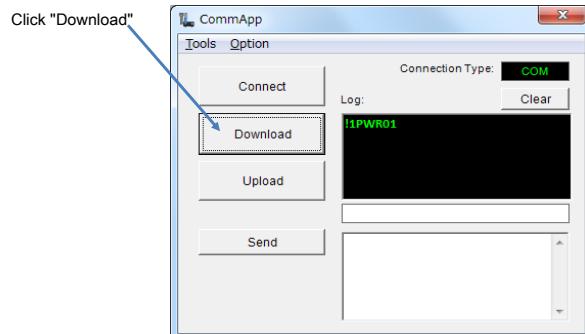

(1)	<p>Connect the USB terminal of the PC and 232C terminal of the main unit (Rear panel)</p>  <p>Need to install the driver matching with the 232C converter cable</p> <p>Example of the cabl USB-232C converter cable</p>  <p>Driver  <a href="https://www.aten.com/global/en/supportcenter/downloads/">https://www.aten.com/global/en/supportcenter/downloads/</a>      Use driver for UC232A</p> <p>PLANEX COMMUNICATIONS INC.      URS-03</p> <p>3.5φ 232C cable</p>  <table border="1"> <tr> <td>Pin 1</td> <td>RJ</td> </tr> <tr> <td>Pin 2</td> <td>TXD</td> </tr> <tr> <td>Pin 3</td> <td>RXD</td> </tr> <tr> <td>Pin 4</td> <td>DSR</td> </tr> <tr> <td>Pin 5</td> <td>GND</td> </tr> <tr> <td>Pin 6</td> <td>DTR</td> </tr> <tr> <td>Pin 7</td> <td>CTS</td> </tr> <tr> <td>Pin 8</td> <td>RTS</td> </tr> <tr> <td>Pin 9</td> <td>Power Input /DCD</td> </tr> </table> <p>RS232 Pinout      (9 Pin Female)</p> 	Pin 1	RJ	Pin 2	TXD	Pin 3	RXD	Pin 4	DSR	Pin 5	GND	Pin 6	DTR	Pin 7	CTS	Pin 8	RTS	Pin 9	Power Input /DCD
Pin 1	RJ																		
Pin 2	TXD																		
Pin 3	RXD																		
Pin 4	DSR																		
Pin 5	GND																		
Pin 6	DTR																		
Pin 7	CTS																		
Pin 8	RTS																		
Pin 9	Power Input /DCD																		

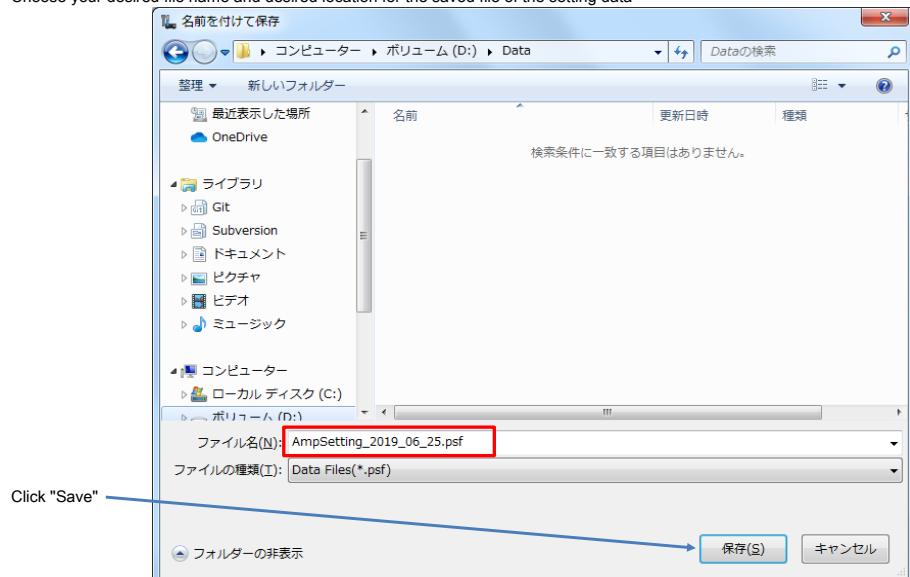

## When saving current setting parameter data to PC file

Collective extraction  
Download

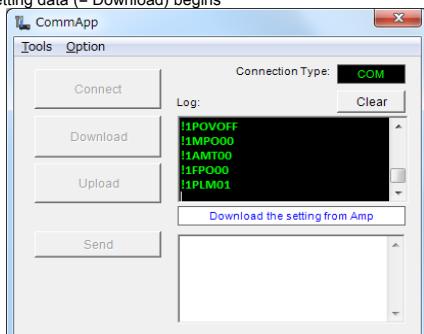

Important: You must have "QSTNCommandData.csv" file in order to execute Download  
Make sure that you have "QSTNCommandData.csv" file together in the same folder as "CommApp.exe"

Choose your desired file name and desired location for the saved file of the setting data

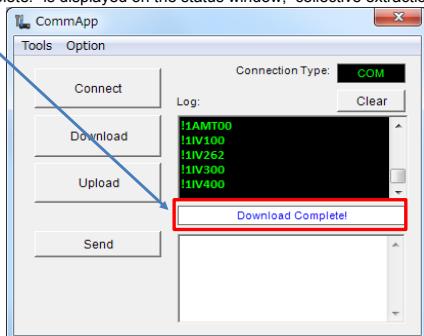

Extraction of the setting data (= Download) begins

It takes around 5 to 20 seconds to finish downloading

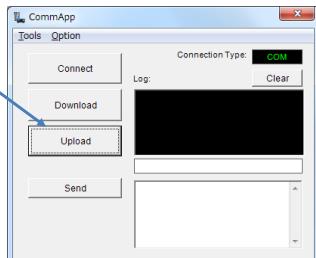

If "Download Complete!" is displayed on the status window, collective extraction is completed

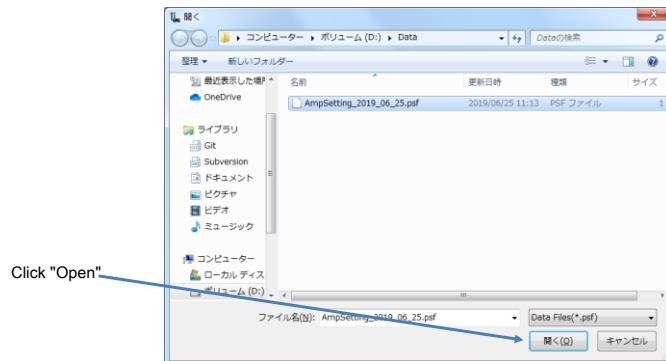

## When transferring saved settings to the unit

Collective setting  
Upload

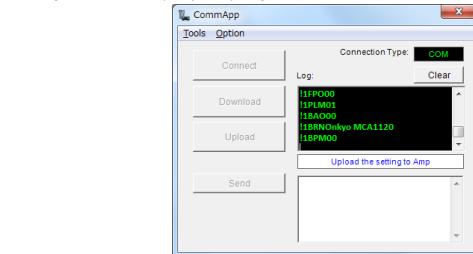

Click "Upload"

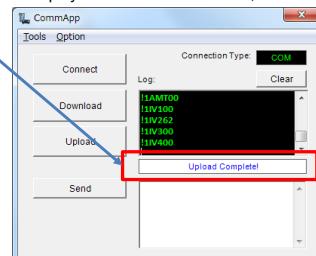

Select the file saved from the "Download" procedure

Click "Open"

If "Upload Complete!" is displayed on the status window, collective setting is completed

**\* Caution point when transferring setting parameter data from old firmware version to new**

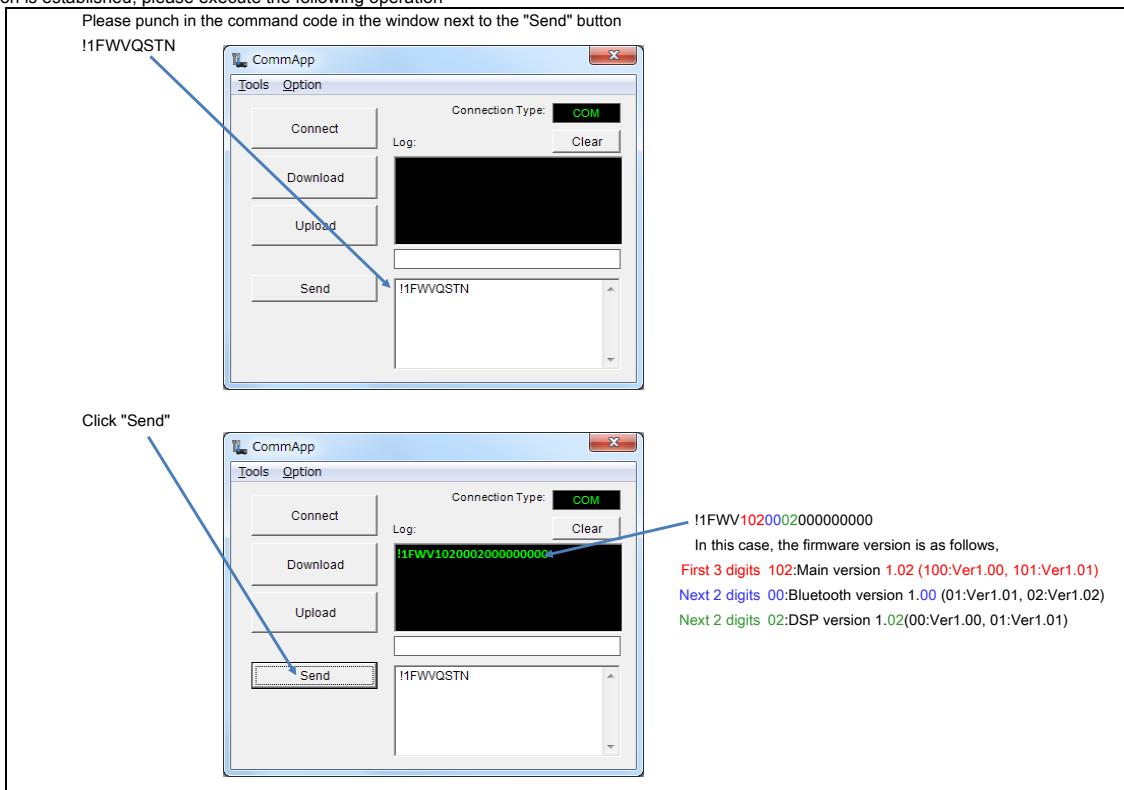

For MCA1120, when extracting setting data from the old firmware version (Main ver.1.00) unit and copying it to a newer firmware version (Main ver.1.01 or later) unit, feedback suppressor EQ settings of MIC 1 / 2 Input will not be reflected. (Not applicable for PCA1120)  
Please refer to the command list, and reconfigure the settings. (Command code: "MQ1" / "MQ2")

Please refer to below and confirm on the firmware version of the unit.

**How to check the firmware version**

Checking on the firmware version of the unit.

After communication is established, please execute the following operation

## PC to 232C Various settings

\*CAUTION \* For functions that can be configured both from the main unit DIP switch or 232C (BGM Mode / Keylock), PC settings will be the priority when 232C cable is inserted, and DIP switch settings will be valid when 232C cable is unplugged.  
 \* In order to have the Keylock setting of the DIP switch valid, please make the main unit AC OFF and ON after you unplug the 232C cable.

\* Settings can be configured when the Power of the Amplifier is ON.

Yes	For all firmware versions
Yes(1)	For firmware version "OI_MCA1120_PCA1120_Firmware_190118" or later
